

The Multi-Stripping Principle

For multi-stripping operations a sharpened blade or pick is selected, suitable for the surface to be removed, which is then attached to the front of the machine. The weight of the machine holds the blade or pick hard onto the floor to affect the removal process.

PPC's multi-stripping machines provide a quick and efficient solution for removing ceramic tiles, vinyls, carpets and old flooring systems, along with their underlying adhesives and levelling compounds. The range includes hand operated machines and large ride-on models.

Product Range

Liberator 75 and 110 multi-stripper machines have been designed to lift a wide range of floor coverings with minimal effort. The tempered steel blades ensure optimum cutting. Ideal for confined areas and edge removal where larger sit-on machines are unable to access.

Strong and powerful, the Liberator 600 Ride On Multi-stripper is one of the heaviest machines on the market, designed to maximise the down force on the blade or pick attachment needed for heavy duty applications such as ceramic tile removal. It has simple hydraulic controls and a tight turning radius. Material removal rates are up to 10 times faster than manual removal.

| Machine | Size H x L x W mm | Power | Weight |
|------------------------------|----------------------|-------------------|--------|
| Liberator 75 Multi-Stripper | 1050x900x250 | 1hp (110v/230v) | 93kg |
| Liberator 110 Multi-Stripper | 1500x1100x700 | 1.5hp (110v/230v) | 153kg |
| Liberator 600 Multi-Stripper | 1880x1651x660 | 25hp | 1136kg |

Applications

Removal of:

- Sheet vinyl, tiles, carpet and carpet tiles
- Ceramic and quarry tiles
- Latex and levelling compounds
- Hardwood & parquet
- Asphalt and bitumous materials
- Thermoplastic line markings
- Foam rubber
- Felt
- Foam and glue residues
- Levelling screeds

Accessories

A selection of the accessories that are available:

| | |
|---|---|
| <p>Tile Lifting Blade Flat Available in 6", 8" and 12" for removal of tiles and screeds</p> |  |
| <p>Tile Lifting Blade Curved Available in 8" and 12" for removal of sheet material, carpets and vinyl. Blade cuts as it strips</p> |  |
| <p>Heavy Duty Pick For removal of hard ceramic and quarry tiles</p> |  |

Selecting multi-stripping as the preparation method

The material to be removed needs to be considered:

1. What type of material is it?
2. What is the composition and thickness of the substrate?
3. Does it consist of a singular layer or multiple layers?

The weight and the position of the blade or pick will affect the removal of the selected surface.

The Preparation Group's technical support team is available to advise and recommend the correct machine and accessories for your specific project.

Heavy duty stripping blades are also available.
