

## Shotblasting Do's and Don'ts

Not an exhaustive list, but here are some quick do's and don'ts to ensure a safe, efficient operation:

DO make sure your work area is clear, swept and free of any debris

DO check all parts are in good working order and that cables are free from damage

DO use it on any hard composition surface that does not exhibit multiple layers of materials or contaminants

DO continually check the profile to ensure uniform results

DO maintain your machine, keeping it clean and dry for safe, efficient performance

DON'T use it in wet conditions

DON'T use it on uneven surfaces otherwise shot will escape

DON'T stand still when the machine is in operation as you will dig a hole in the background surface

DON'T use it on soft composition screeds

DON'T use it on bitumous and sticky adhesives
