

Warehouse Maintenance

Prevent Slips & Trips

Forklifts in the warehouse environment are constantly moving inside and outside of the premises every day, bringing in dirt and water from outside. Not only does this operation often mark the floor surface, but a slippery, dirty floor can result in slips, falls and a high risk of forklifts skidding as they manoeuvre.

Therefore, it is important that housekeeping and maintenance programs are adapted to overcome these hazards. A quick and easy solution is to regularly clean with rotary scrubber dryers when fitted with The Preparation Groups storm pads, rubber deposits from tyres, dirt and stains are eliminated providing a safe clean floor. The Preparation Groups's storm pads come in 4 grades for maintenance, heavy duty cleaning daily buffing and shining. Suitable for most floor surfaces, no chemicals are needed and because the pads are infused with millions of diamond particles they can be used again and again for long lasting cost-effective results.
