Our Planing Machines incorporate many design features for easy operation. There are no complicated controls, the drum lowering levers provide simple height adjustment for precision setting to the required depth of cut. All models are constructed from heavy duty steel for long life and durability.

### What do Planers do?

They all work on the same principle, where the drum in the main body of the machine rotates at high speed. The profile and cleaning properties are produced by the type of flails fitted to the drum, which cut with a downward rotary action.

### Choose Planing for:

- grooving
- reducing levels
- removing screeds, thermoplastic lines, thick paint & surface contaminants on concrete & asphalt

Our Planers are designed to be used with dust extraction.

**Dust Extraction**

To control dust created by the planing process, our machines are designed to work with industrial vacuums.

Our 202DS and M450 vacuums feature easy change, long life filters (including the option of 'H' filters) and are built from heavy duty steel to withstand tough site conditions.

**200 Planer -  
Use with 202DS or 202DSL**

**250 & 320 Planer -  
Use with M450 or M450LP**

The LP, Longopac® options, are for safe bagging of hazardous materials..

The correct selection of vacuum is critical to ensure containment of dust & a safe working environment.
