We make environmentally friendly machines that are easy to use, long lasting & high performance with minimal maintenance.

What is Shotblasting?

Steel abrasive or 'shot' within the body of the machine, is propelled at high velocity onto the background surface, cleaning, texturing & removing surface finishes. The debris is collected into Dust Extraction Units.

Choose Shotblasting for:

- preparing concrete, steel & asphalt
- removing coatings & surface contaminants
- providing anti-slip properties on floors, roads, runways, ship decks, car parks & steel platforms

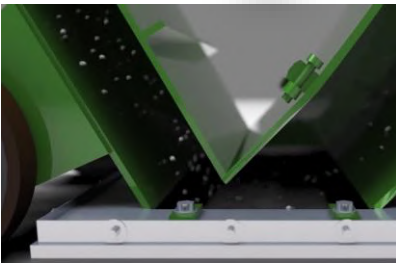

Why choose us?

1. Made from High Grade Manganese Steel

Machines are long lasting & built to withstand tough site conditions.

2. Powerful motors & gearing

Steel abrasive is propelled at the surface with a greater tip speed & force than competitor models, for quicker results.

3. Uniform results

Even weight distribution means easy operation & uniform blast patterns.

4. Long life wear parts

Made from high grade materials & proven to last up to 50% longer than other makes.

5. Easy change wear parts

Simple design features mean that tuning kits & liners are replaced easily in minutes, with no need to dismantle the machine.

Dust Extraction

Our Filtration Units are fitted with hydrovane technology for maximum suction & high particle dust containment.

**265 & 400 Shotblasters. -
Use with 2 Filter Unit**

**400 & 558 Shotblasters –
Use with 3 Filter Unit**

Featuring easy change, long life filters & large dust collection boxes for continued, uninterrupted use, they are built to last & to minimise servicing, maintenance & repairs.

Our high performance Vacuum Units are for use with smaller shotblasting models, efficiently collecting debris & dust.

**215 Shotblaster –
Use with 202DS/202DSL
or M450/M450LP vacuum units.**
